# Sprint Report - Sprint 4

SLUG SPACE | TEAM HOMELESS-NO-MORE | DEC. 3, 2017

## Actions to stop doing:

• Putting off work until the last minute

#### **Actions to start doing:**

• Push to github more consistently

### Actions to continue doing:

- Communication through Slack for project problems
- Push work to correct branch
- Make sure work is functional before pushing
- Maintain the sprint board. Updated the Sprint board as members finished their task.

### **Work completed this Sprint:**

- As a developer, I want to redirect users to login page from create listings, dashboard, etc IF they are not logged in
- As a user, I want a logout button that displays on top right only if I am logged in
- As a developer, I want to on click of logout button, user is logged out of session and cookie is deleted
- As a user, I want functionality to insert/embed pictures onto map/dashboard/listings pages
- As a developer, I want to maintain owner of listing in db either through another table and/or another field
- As a developer, I want to create function or a way to return all listings that belong to a user
- As a developer, I want to on showing interest, store/update number of interests in listings' database entry

• As a developer, I want to add database functions to models to query listings based on attributes listed above (multiple)

### **Work not completed this Sprint:**

- As a landlord, I want to create page to add events to their listings
- As a developer, I want to store events inside database for their corresponding listings
- As a user, I want to have an option to show interest in listings on the map

### Work completion rate:

We completed a total of 3 user stories during this sprint, with one user story flowing forward due lack of time for our current sprint objectives. Our initial estimate for the total number of ideal working hours was 35 hours for this sprint, but we ended up bringing that to about 45 hours of ideal working hours as this was our final sprint. Our burn up chart below outlines our progress made throughout the sprint.
